

Why Choose SPORT FLOOR?

There are many reasons to choose SPORT FLOOR over the competition and below are list some of the reasons why you too should choose SPORT FLOOR.

SPORT FLOOR is a leader in the industry of high performance modular sport surfaces.

SPORT FLOOR; "the original outdoor sports tile", was invented and patented in 1976 by Peter Kung, through research at the University of Stuttgart, Germany, in conjunction with input from the clinic of orthopedic surgeons in Zurich, Switzerland.

SPORT FLOOR has grown in sales and popularity since the first product was designed and produced, and is protected under patents and international trademarks around the World.

At present, SPORT FLOOR surfaces are successfully sold in North and South America, Europe, Asia and Australia. We offer the best performance to price ratio in the market.

SPORT FLOOR outdoor sports surface is medically recommended by American and European orthopedic society as the safest modular synthetic court surface the market today.

SPORT FLOOR all weather surface was developed for tennis and multi game courts, which reduces stress on back and lower body extremities. It also reduces court downtime due to weather conditions, and has a 10 year unlimited UV warranty and life expectance of over 25 years.

SPORT FLOOR all weather surface uses virgin materials to produce its tile. This allows for better quality control over the product than our competitors who use recycled materials that tend to fade over time. Your new SPORT FLOOR court is color fast and will look like new for many years to come.

SPORT FLOOR uses the best UV protectants, stain resistant agents, antioxidants, antifungal, and anti mildew agents available to create their tiles. This helps make the SPORT FLOOR tile virtually maintenance free. The only recommended maintenance is every 2 -3 years to sweep away any dust or dirt that may have accumulated under the tile. A good leaf blower or shop vac is recommended for this.

SPORT FLOOR incorporates an expansion joint in every tile. This allows the court to "breathe" by expanding and contracting with extreme weather variations. Most of our competitors don't incorporate this expansion joint which helps prevent tiles from buckling.

SPORT FLOOR is 3/4" thick most of our competitors use a 1/2" thick tile.

SPORT FLOOR has a "no skid" surface that helps player gain better foot control .

SPORT FLOOR is a proud member of the USTA and is please to report that SPORT FLOOR meets all specifications set by the NCAA for modular performance sports surfaces.

SPORT FLOOR is endorsed by 2002 & 2003 Wimbledon & US Open double champion Jonas Bjorkman.

Basketball-Goals.com offers our customer's the SPORT FLOOR tile directly, so that everyone can enjoy a backyard game court. Many of our competitors simply won't sell you their tile direct unless they install it for you. Basketball-Goals.com allows the customer to purchase the tile and install it themselves saving hundreds and in many cases thousands of dollars off our competitor's prices. And since Basketball-Goals.com doesn't have the overhead normally associated with local dealerships, we can offer you a better price and a superior product. And make no mistake there are no special skills or tools needed to install a SPORT FLOOR court. The main court tiles are 10" x 10" and the line and filler tiles are 2" x 10". The tile arrives on pallets in sheets of 4 tiles wide by 4 tiles long already clipped together. With each order the design team at SPORT FLOOR creates a template specific to your particular order. Simply clip the tiles together, lay them on top of any hard level surface as shown on your template and you're done!

All straight game lines come included with your SPORT FLOOR order and are inlaid tiles, only the arc lines such as the top of the key semi circle and 3 point lines of a basketball court need to be painted. To accomplish this we offer a court stencil that comes with a roller (paint is not included). A special mixture of paint is available at any Sherman Williams commercial paint store. After the court has been laid onto your subsurface simply unfold the stencil line it up with the lane of your court the stencil is cutout where the arc lines are to be painted, simply use the roller to paint the lines and you're done. You do not have to anchor or glue down a SPORT FLOOR court the sheer weight of the tile and its pyramid underside design keep your SPORT FLOOR court in place.

We also offer factory installation services for courts over 2000 sq ft nationwide. We carry a full line of mesh ball containment fencing, multi-sport game nets, lighting, rebounders, tennis ball machines, basketball goals, tennis court benches and canopies and much more.

If you don't already have a subsurface installed click here to download a subsurface installation guide.

If you already have an existing subsurface and would like a quote click here.
